

Calvet chair

Antoni Gaudi (1852/1926) is, without doubt, the most internationally well-known Spanish architect. But is not only his buildings and brilliant architectural solutions that have travelled the globe. His integrated conception of architecture led him to pay attention, not only to structural calculations, but also to all the decorative elements, including furniture, that would form part of the building. The admiration felt by modern designers for the furniture designed by Gaudi has not gone unnoticed by Bd which was the first company to rescue them from history by embarking on their serial production using traditional art and craft techniques and the same materials -varnished solid oak- in order to reproduce all the rich detail displayed by the originals when they were first produced.

Solid varnished oak.
