

Tak table - metal leg

The focus on the essentials determines the form and function of Tak. Three simple, intuitive steps are all you need to operate the revolutionary extension. The uncompromisingly slim shape perfectly conceals its extension and at the same time offers seating with maximum legroom. As if it were assembled from flat surfaces, it combines organic accents with a cubist design language, both as a non-extendable table and as an extended one. The strong but slender solid wood panel, just 16 mm thick, can be extended to up to 3 m in length. You can choose a base made of shiny chrome, matt chrome or matt bronze.

Available in various sizes, wood species and finishes.
