

FM-212 Smile recliner

Smile - relax with a smile.

With its new, patented adjustment mechanism, Smile offers comfort that stands out from the rest and can be stopped at any angle without any effort. The trigger for the back mechanism is discreetly built into the armrest and offers support even with the backrest in reclined position. Footrest and seat back are adjustable separately. This slim chair offers an especially long footrest, both in the passive and active relaxing position. Set on a rotating base, "Smile" is a flexible partner in every living room. Smile is available in fabric and leather.
