Chair

Stefan Diez has designed a wooden chair program that relates to our bentwood heritage but transformed it by aesthetical and technological criteria. Bent chair legs and armrests merge in a "knot" and are embedded from underneath in the ergonomically shaped seat. With a suspenseful contrast between the elegantly curved wooden elements and the striking upholstery the program communicates and also offers comfort: it does not prescribe a specific seating position, and the organically shaped backrest is comfortably flexing.

Chair (404) and larger sized armchair (404 F). Seat and backrest made of moulded plywood, leg and backrest rails made of laminate wood.

Upholstery covers in leather or fabric. A matching wooden barstool (404 H) is available.
