

Ameba pendant light

The Ameba lamp is a Pete Sans design for Vibia. The Ameba presents a new concept of modern LED hanging lamps that specifically adapts to the spaces where it's used. Allowing for the creation of bespoke compositions to suit any project requirements, the design professional can achieve a unique and customized lighting solution.

The Ameba collection brings together 5 different modules that combine and fit together perfectly with one another to allow for an infinite number of compositions. This collection is also available as an individual fixture for private and residential use. Ameba is available in two finishes: matte lacquered white and graphite gray.

Design by Pete Sans. Made in Spain by Vibia. An organically shaped pendant light that provides direct and indirect illumination through its acrylic shade, with frosted acrylic top and bottom diffuser, while hanging from a polished chrome canopy. The Ameba uses compact fluorescent lamping with electronic dimmable multi-volt ballasts 120-277. Dimming controls must be compatible with Advance Mark 7 dimming ballasts, featuring 0-10V dimming down to 5%.
