

Link and Link XXL ceiling light

LINK XXL

Like the skyline of a great city.... The modules of the Link XXL lighting system allow you to create silhouettes and volumes on the ceiling to suit every room and location. Link consists of three modules in different sizes and heights, which connect to one another, to offer a wide range of geometries perfectly fitting into the architecture of the ceiling.

LINK

Geometry as decor... The Link is a series of preconfigured geometric patterns that can be arranged across the canvas of a ceiling. These configurations have shallow profiles making them ideal for residential and hospitality settings or anywhere with low ceilings. The combinations of different rectangular shapes create surface fixtures of different sizes, with up to five combined cubist forms.
