

Hi! side table

This appealing and versatile side table, which can be used in many living areas, introduces itself with a pleasantly laid-back hi! A distinguishing feature of hi! is one leg that extends upwards beyond the edge of the table top which can be used as the base for smart extensions. The elegant leather loop of the basic version is a charming design element, as well as a convenient handle to comfortably pull the hi! side table towards you or to carry it. If hi! is to be used in the entry hall, you can add a practical shoehorn, which the clever design of hi! will always put within your reach. This side table becomes a real hi!-light when it is combined with an LED lamp. It can rotate, swivel and tilt, to provide the perfect light for reading at any time in both the living room and the bedroom.

With its cutting-edge 3-layer technology, and just 12 mm thick, the pure solid wood table top is perfectly integrated into the sleek overall design of the hi! side table. The top is in itself a fine specimen of craftsmanship, and that same level of excellence is found in the table's underpinnings: The high-quality connections of the individual base elements with cross lap joints and beautifully hand-crafted mortice and tenon joints ensure maximum stability. Alternately, you may select the transparent glass table top. It allows you to see the wooden joinery of the elegant base and reinforces the elegant impression of the hi! side table.
