

Deck coffee table

Deck, designed by Christophe Pillet, consists of a square base volume in treated metal, where a thin C-shaped metal profile is welded on and solid Canaletto walnut slats are built-in, that recall an actual deck after which it is named, due to the considerable thickness of the wood. The unique matching of different materials makes it a noble accessory, with a rich look but natural at the same time, mainly standing out when positioned in front of a sofa.
