

Filigno

Filigno makes it possible to create elegant, flowing transitions between kitchen, dining and living areas. Central to this design are our passionate and consistent devotion to wood as a material, and the use of our innovative 12 mm three-layer board. Elegant solid wood panels form a sophisticated casing and create the delicate style which defines filigno. A wafer-thin shadow gap between the top board and side panels cleverly breaks up the uniformity of the wooden casing, emphasising its precision craftsmanship. Like cubus and cubus pure, filigno allows impressive, almost unlimited versatility in planning. With refinement, elegance and modernity, filigno offers a lot of leeway for various design styles, from simple and elegant to flexible and young.

In addition to storage furniture with drawers, flap fronts and hinged or sliding doors, there is also wall shelving in L, C or U-shapes. Wall shelves provide a place to display books, home accessories or collector's items. The filigno wall shelf can be hung on its own or be combined with additional shelves. If desired, LED lighting can be installed in the shadow gap on the wall shelving unit's rear panel. Atmospheric lighting turns the wall shelf into a display stage, transforming the your favourite objects into eye-catching features in your home.

The defining feature of our filigno range is the slender solid wood casing, just 12 mm in thickness. A technological challenge that demonstrates TEAM 7's innovative skill and expertise with wood. Combining this kind of delicate design language with tremendous stability can only be done using our ultra-modern three-layer technology. TEAM 7's three-layer board incorporates not just innovative technology, but also a passion for traditional hand craftsmanship: using top quality edge inserts and hand-sorted wooden surfaces.
