

DS-262

Armchair

DS-262 bt Stefan Heiliger for de Sede

The armchair DS-262 is surprising for its unimagined flexibility: the architecture of the armchair is based on two parts, each able to swivel about its own axis. Depending on how the two chair parts are rotated relative to one another, the lower part can be used as an armrest, a footrest or practical shelf.

With its generous design, this revolving armchair rises up in the room like a sublime sculpture. Elegant buttoning and fine piping on all sides underscore its impressive appearance.
