

# Couture & Little Couture

The Couture Armchair is a fusion of artisanal and industrial techniques. The stitches represent a topographic map resulting in an organic pattern, simulating the growth in wood. The use of gradient colours for the wood, amplifies the effect of layers used and increases the sensation of unifying hard materials. The result is an armchair with strong personality which holds maximum evidence of artisanal processes.

Little Couture is like a prêt-à-porter version of our Couture armchair. It is based on the same swivel base, but with a lower back. The wooden part that stop at the armrest level and surround the armchair is composed of 2 layer of wood that holds together with the recognizable stitch which goes straight through the wood using our unique Wood Tailoring technique.
