

DS-414 chair

DS-414 by de Sede

DS-414 is a chair that follows the movements of the person seated and provides noticeable support for the sitting posture: sitting has never been so healthy - no wonder, since the model is based on a novel movement mechanism.

Available as a cantilevered chair or with a star base, the consistent further development contains everything one needs to bring the new culture of sitting to the table. But de Sede takes things a step further still, by selecting materials that permit a high-quality material mix of leather and fabric, suddenly lending DS-414, the little brother, a distinctive appearance all its own.
