

LT 40 System - wall and medium units

Versatile in its aesthetics and function

At the centre of Lema's new ideas for 2019 is the LT40 daytime system designed by David Lopez Quincoces, the result of a long conceptual study and an attentive industrial development. A highly customizable articulated system of containers and wall elements designed in four possible configurations: freestanding, wall, suspended and The latter presented in matt lacquer and the W Line wooden version, with three-dimensional ribbed graphics obtained by a complex hand-worked process.

These four families, mixed freely together, characterize the architecture together with a series of additional elements which complete the LT40 design: double-faced containers, benches and elements designed to house multi-media apparatus; shelves and panelling with structural frames in aluminum, adjustable and designed for wall mounting; trays and tops in marble or stone; container boxes in wood or glass and built-in LED lamp systems.

The system is enhanced by the LT_FRAME containers, with a strong graphical and chromatic impact, in six predefined types of configuration. Six cornices in two-dimensional types enclose the "tesserae of a mosaic" made up of color, wood and transparencies, framed in a perfect equilibrium of rigorous, subtle forms. Designed for hanging on the wall and supplemented by a discreet LED light which emphasizes the internal perimeter.

The customization of LT40 is reflected also in the wide range of finishes available for all the elements of the system: wood, lacquered, glasses, clays, natural and reconstructed marbles. The structure is in Grey Velvet, an innovative ultra-matt material, velvety to the touch yet high-strength.

Finished full-height flanks complete the compositions and full-width tops are 25 mm thick. A "tailor-made" system, perfectly and finished with a thickness of 25 mm in all the Lema finishes.
