

# Range S 32 Stool

With the bar stool S 32 VH and the counter stool S 32 VHT, Thonet is reacting to the current trend towards high tables and counters in gastronomy, in agile, future-oriented working worlds and in residential areas home environments. With seat heights of 65 cm (S 32 VHT) and 75 cm (S 32 VH) the stools promote productive exchange in all kinds of communication zones – at height-adjustable desks, bars and kitchen counters, and high tables.

The design is based on the famous tubular steel cantilever chair S 32 by Marcel Breuer from the 1920s whose popularity is due to the suspenseful combination of materials: Thonet's tradition in producing bentwood furniture with the characteristic Vienna cane work forms a contrast with the reduced use of tubular steel. With its clear, minimalistic design combined with the airy cane work, the S 32 VH paves the way for use in various interiors, such as lounges and office spaces, reception areas, restaurants and bars. Because of the light weight (8-9 kg), the comfortable seating furniture can be easily carried around and repositioned.

Barstool, Frame chrome-plated or colour-lacquered tubular steel. Wood parts in stained beech, covered with wickerwork and transparent, supportive plastic mesh; or with stretched mesh, or upholstered with leather or fabric.
