

Puck Wall Art wall sconce

The designer Jordi Vilardell created the Puck Wall Art lights as an addition to the Puck lighting collection, allowing customized lighting compositions to be conceived based on the same formal idea. The Puck Wall Art light combines two circular wall lights of different sizes which are superimposed over one another to create light compositions either on their own or grouped. The Puck Wall Art light provides an indirect light and only requires a single electrical point connection which makes it easy to install.

A versatile wall sconce that creates a visual game of warm light with spheres. Designed by Jordi Vilardell. Available in three lacquered aluminum finishes.
