

Pisa Height Adjusting Desk

With Pisa, TEAM 7 is breaking new ground in home offices. The desk is made of pure solid wood and combines modern office features with the appeal of a natural home environment. The diagonal lifting column is both a design feature and an innovative piece of technology. It allows the desktop to be electrically adjusted to any height from 67 - 115 cm. The Pisa desk can be adapted to meet your requirements to the nearest millimeter, for use in a sitting or standing position. Pictures and pinboards on the wall are no problem, because the table top automatically moves forward slightly as it rises. Pisa's light, slender style means it combines superbly with other TEAM 7 furniture ranges, transforming your home working space into a wohnofficeT7.

A flush-fitted, magnetic cable outlet in the table top ensures that cables vanish elegantly into an almost invisible cable channel below, which includes a 6-way power socket board. For mobile devices there is also an optional, flush-fitted, media flip top with a dual power point, USB A and USB C chargers. An additional top unit is available for the desk, which includes a storage shelf and can be finished in any TEAM 7 fabric or leather colour, to match the TEAM 7 chairs and the pisa pedestal. An optional LED light strip can be added on request to provide comfortable light for working. Another optional feature is the almost invisible desk drawer, for extra storage space.
